

BuildersCAD 9.1 **Update Notes**

* Public Release

<u>Spin</u>	<u>Date</u>	<u>Fixes and Enhancements</u>
110*	03-19-2007	ARRIS 9.1 Release Candidate Added calibration from BuildersCAD database to eZ 4.0 Fixed a small problem with the Query Area menu.
109		Internal Testing
108		Internal Testing
107*	02-13-2007	Fixed a problem with selection in the Roofs Module Fixed a minor problem in the BCAD Status menu Fixed a minor problem in the Notes Catalog Manager Added a new Query Area menu and improved area calculation and boundary chase.
106*	11-21-2006	Fixed a problem where placing a beam pocket at the end of an edited wall will place the beam pocket outside the wall. Fixed a problem where a wall inserted by measuring off the end of a wall was not inserted perpendicular. Fixed a problem with the Move Wall tool in the Wall Edits. Added a setting which allows the user to set the Project File location for Materials Reports. The "Project Location" option at the bottom of the Materials Application Status menu gives the user the ability to select an independent location for the project information when generating materials reports. Project Files may now be located in either the Standards (STD:), Project (WRK:), or User Home (USR:) directory. Previously these files could only be located in the User Home directory, which is still the default. The Global.icg, pm_puse.dir and Wall Framing project folder (such as pn_std.wf) must all be present in the project location as set. If the wall framing project location indicated in the Walls Application does not point to the Project Location, a cautionary error message will be generated. The Materials Application will allow all reports to be generated using data in the indicated location and for the current database. Updating of project data such as the Stock File, Estimating
